

New: BOD measurement system BD 600

The BD 600 is our latest device for BOD measurement. The new device is designed specifically for use in laboratories and purification plants and enables automatic BOD measurement at customizable intervals (over 1 to 28 days). All result information can be continuously monitored on the large graphical display. Data can be transferred via USB (stick or cable) or SD card directly into Excel® for processing. A remote control can interact with the device to perform basic functions even through closed glass doors.

The menu navigation is currently available in German and English. Additional languages, like Spanish, French, Italian or Portuguese will be updated periodically. We will publish these updates on our website. **Please note: As of now, the BD 600 replaces the OxiDirect, our previous model. Existing offers are not effected by this.**

To celebrate the launch of the BD 600 we are offering a special price for a limited time (click [here](#) for your personal offer). We're also pleased to offer an online product training for customers who wish to learn more about this new product. Registration will be open until June 30, 2015 – for questions regarding this training, please contact Ms. Petra Gäntgen [by email](#).

Please visit our website for further information or contact our sales team.
